

Verdure Green Coffee Bean Blend 60 capsules

Green coffee bean extract: Green coffee beans contain a substance called Chlorogenic Acid, which is believed to be responsible for their weight loss effects. A nutrient largely destroyed during the roasting process, CGA helps to slow the release of glucose into the body after a meal, thereby promoting weight loss. The caffeine also helps to release fatty acids from fat stored in the body, while the chlorogenic acid and its related compounds then help the liver to process these fatty acids more efficiently.

Verdure Green Coffee bean is High-strength and a natural slimming formula

Beneficial for;

Weight loss
